

# CASE STUDY

## HITRUST II SOC 2 II ISO

**This company continues to stay HITRUST certified and SOC 2 compliant with Accorian**

### The Client

The Client is a SaaS (Software-as-a-Service) platform that provides a unified employee hub for businesses. The platform is leveraged by 100 companies operating in multiple geographic locations worldwide.

### Challenge To The Client

To meet multiple compliance frameworks (HITRUST, ISO 27001, SOC 2) across various industries and geographies in less than a year.

### Challenge for Accorian

To create a single roadmap that covers both security and compliance. Furthermore, to manage regular updates of their audit cycle, policy procedures, and vulnerability management. This is to help speed up compliance and reduce friction.

## Benefit To The Client

In contrast to their initial estimate that HITRUST and ISO would have taken them over two years, the client obtained all three credentials in about a year. We were able to manage all three frameworks with limited resources. This allowed them to demonstrate their maturity and growth in the health sector, with HITRUST, and in their international markets, with ISO.

## About Accorian

Accorian is an established cybersecurity advisory firm with a global clientele that assists businesses of all sizes in improving their cybersecurity compliance and provides staffing for long & short term business needs. Our team includes cybersecurity and IT industry veterans who have held leadership and CXO roles at large global enterprises. Headquartered in New Jersey with offices in Canada, UAE, and India, they bring extensive experience to our clients.

## Our Challenge

< We conducted one gap assessment across three frameworks, leveraging Accorian's unified framework.

< As implementers and assessors for all three frameworks, we were able to deploy our expertise to create one team that could ensure the policies/procedures, implementation requirements, and audit evidence would fulfil the needs of all three assessments.

< Based on their objective and gaps, we recommended HITRUST first, followed by ISO and SOC 2. Once HITRUST certified, they could cross-reference controls to SOC 2 and ISO 27001.

< Initial HITRUST certification took ten months, and then SOC 2 and ISO certifications followed in just six months.
